

remote podcast guest tech tips

# remote podcast guest tech tips, to maximise quality

Have some **headphones** connected to your laptop  
/ PC

These can simply be Apple or similar earphones,  
with the **mic incorporated**

Or better still specific closed back headphones.  
These are much more accurate and will also **help  
with noise cancelling**

# remote podcast guest tech tips, to maximise quality

If you have a stand alone microphone for recording other than the built-in option on your computer please **ensure you're around 3-4 inches away** when speaking into the microphone

Ensure that Riverside or your recording platform recognises this as your **primary mic** during recording, via the options as you sign in

# remote podcast guest tech tips, to maximise quality

Try and not wear a high collar garment, as this can rub against ear/head-based microphones and interfere with the audio quality

If you have long hair it is useful to tie this back

Try and ensure you have a **stable wi-fi connection**, drop out can sometimes result in the loss of a recording

Ensure you are in a **quiet room if possible** and mention to any other members of the household / office that you are on a recording to reduce interruptions

If you are in a large room, **try and situate yourself in the corner** and if you have windows ensure that they are closed and if they have curtains close the curtains. **These measures help a lot with soundproofing**
